Inference pipeline
Question
What does Section 30A provide regarding application of section 19?
1. Candidate retrieval
Retrieve the top-k paragraphs with BM25, dense retrieval, fusion, or a section rule.
2. Source selection
Choose one candidate using reader logits or the independent BGE reranker.
3. Answer extraction
Use the fixed reader to extract one continuous span from the selected paragraph.
System output
Predicted answer and selected Act and provision.
Offline annotation-relative checks
Candidate-access check
Is the annotated paragraph in top-k?
No: candidate-access failure
Source-selection check
Was the annotated paragraph selected?
No: source-selection error
Answer check
If the annotated source was selected, does the normalised answer match?
No: non-exact extraction
Yes: source-correct exact match
Checks use the retained benchmark annotation. They do not alter inference or establish the legally controlling source.
